                                                                                                                                                                                                               The sequences given in AAR29008-09 were encoded by plasmids which were used in example to illustrate the production of a human antibody which recognises human interleukin-6 receptor (IL-5R). The antibody comprises light (L) chain and heavy (H) chain variable regions which were derived from a mouse monoclonal antibody produced from the hybridoma AUK64-7 which contained the plasmids p64-k4 and p64-h2. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Reconstituted human antibody to human interleukin-6 receptor has low antigenicity and contains mouse V-region complemental determining regions

                                                                         This is the amino acid sequence for the light chain of muM4TS.11, a novel antibody which specifically binds to the platelet derived growth beta receptor (PDGF-R beta), but not within the fifth extracellular Ig-like domain, where the antibody inhibits PDGF BB-induced proliferation of a cell expressing the PDGF beta receptor. The antibody can be used in a method of inhibiting intimal hyperplass in the vasculature of a mammal. The antibodies can be used for the treatment of disorders related to PDGF activity such as disorders involving proliferation of smooth muscle cells, and including restenosis following angioplasty.

IIAA SEQUENCE 1.0
ID AAB20444 standard; Peptide; 16 AA.
                                                                                 The present sequence is that of complementarity determining region 3 (CDR3) of an antibody having anti-Factor IX (FIX) or anti-activated Factor IX (FIXA) activity. Such antibodies anti-activatives (including those that comprise the present CDR3 peptide) have Factor VIIIa (FVIIIa) cofactor activity or FIXA activating activity. Administration of the antibodies or their derivatives leads to an increase in the processulant activity of FIXA, even in the presence of FVIIIa inhibitors. This allows for rapid blood cosgulation even in the absence of FVIII or FVIIIa, and the case of FVIII inhibitor patients. The antibodies or their derivatives are used in a claimed pharmaceutical composition for treating patients with blood cosgulation disorders, especially in aemophilia A and haemorrhagic diathesis.

CPB-binding protein - African clawed frog
NyAlternate names: cytoplasmic polyadenylation element-binding protein
C;Species: Xenopus laevis (African clawed frog)
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 21-Jul-2000
C;Accession: A55377
R;Hake, L. E.; Richter, J.D.
Cell 79, 617-627, 1994
A;Title: CPEB is a specificity factor that mediates cytoplasmic polyadenylation
A;Reference number: A55377; MUID:95042759; PMID:7954828
A;Accession: A55377

 Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

The first step is a dehydration of threonine, its lowed by rehydration and liberation of ammonia. CATALYTIC ACTIVITY: 1-threonine = 2-oxobutanoate + NH(3). COPACTOR: Pyridoxal phosphate (By similarity). PATHMAY: Isoleucine biosynthesis; first step.

SIMILARITY: BELONGS TO THE SERINE/THREONINE DEHYDRATASE FAMILY.

"Tudor, a posterior-group gene of Drosophila melanogaster, encodes
novel protein and an mRNA localized during mid-oogenesis.";
Genes Dev. 5:2060-2070(1991).
-1- FUNCTION: REQUIRED DURING COGENESIS FOR THE FORMATION OF
PRIMORDIAL GERM CELLS AND FOR NORMAL ABDOMINAL SEGMENTATION.
-1- DEVELOPMENTAL STAGE: EXPRESSED THROUGHOUT THE LIFE CYCLE.
-1- MISCELLANEOUS: THE TUD MRNA ACCUMULATES WITHIN THE POSTERIOR
REGION OF THE DEVELOPING COCYTE DURING THE EARLY TO MIDDLE STAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Schweingruber M.E.;
                                                                                                        diphosphate + S-adenosyl-L-methionine.
COFACTOR: Binds 2 divalent ions, such as magnesium 1 potassium ion per subunit (By similarity).
PATHWAY: Activated methyl cycle.
                                                                                                                                                                                                 FUNCTION: Catalyzes the formation of S-adenosylmethionine from methionine and ATP.

CATALYTIC ACTIVITY: ATP + L-methionine + H(2)0 = phosphate +
  European
                                                                                          SIMILARITY: BELONGS TO THE ADOMET SYNTHETASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  _TaxID=4896;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SCHPO
